INTRODUCTION

In response to the problem of roadside litter in Jefferson County, the Environmental Quality Committee formed under the Jefferson County Health Action Partnership has been working to promote environmental stewardship.

One of the Committee's endeavors has been bringing awareness to the blight of litter in the County. The Committee has chosen to address this environmental concern through removal efforts, education, and promotion of recycling. The Community Assessment Division of Environmental Health Services at the Jefferson County Department of Health with assistance from Action Environmental Services resurveyed the roadways in the original 2006 Litter Survey to evaluate the progress of litter removal since the 2006 survey. The results of the Jefferson County 2011 Litter Survey are included in this report.

CONCEPTS AND METHODOLOGY

- Research methodology adapted from other studies, specifically the 2004 Ohio Statewide Litter Study conducted by Davey Resource Group for the State of Ohio Conservation and Resource Department.
- Evaluate possible sites for collection
- Select sites and map
- Devise strategy for collection
- Research equipment and purchase
- Enlist personnel
- Collect litter samples
- Evaluate composition
- Record data
- Prepare detailed report
- Evaluate results
- Provide recommendations

CONCEPTS & METHODOLOGY

SITE EVALUATION

- Twenty-seven Sites were selected on roads maintained by the Jefferson County Roads and Transportation Division. These were dispersed throughout the County. As much as possible, sites were representative of different municipalities and commission districts. Two sites were located within the City of Birmingham. Sites were evaluated for accessibility and safety prior to collection.
- Site Information Folders were created for each site. These contained the site location, a street map for the site and data recording sheets.
- As much as possible, sample sites were marked 500 feet along both sides of the roadway. The sampling depth was 10 feet if possible. Site sketches were drawn for each site.
- GPS longitude and latitude readings were recorded using a handheld device for each site surveyed. This facilitated plotting locations on a map using geographic information systems technology software (GIS).

COLLECTION

- Litter was collected by Jefferson County Department of Health (JCDH) and Action Environmental Services employees.
- Bags were tagged with pre-printed labels and returned to Jefferson County Department of Health for weighing, sorting, and counting.
- Each bag was weighed and the weight recorded on labels and data recording sheets.
- Items were sorted into nine (9) main categories and then further sorted into sub-categories.
- The weight of each category was recorded.
- The number of items in each sub-category was recorded.
- Cigarette butts were counted on site with hand-held counters, but were not collected.
- Glass, plastic, and metal cans were delivered to the Alabama Environmental Council Recycling Center after the weighing and counting process.

DATA

- Data were compiled and input on Excel spreadsheets
- GPS readings were input and a map of site locations was created by Scott Hofer in the Watershed Protection Division of the Jefferson County Department of Health.

RESULTS

See Appendix A

HIGHLIGHTS

- A total of 351,225 square feet of roadway was sampled
- A total of 6.14 linear miles of roadway was sampled
- The total weight of the litter collected was 766 pounds
- The calculated average weight of the litter collected was 125 pounds per linear mile
- The total number of items collected was 6,116
- The total number of cigarette butts counted was 8,648
- For individual category results see Appendix A

CONCLUSIONS AND RECOMMENDATIONS

In order to address the ongoing litter problem within Jefferson County, cooperative efforts must be initiated by both governmental and private agencies. Analysis of the results reveals that most of the litter collected was related to fast food consumption or convenience store purchases (78%). Citizens must become aware of the detrimental effects of litter on the environment and the economy. Individual responsibility would be an effective deterrent to the accumulation of roadside litter. If citizens do not exercise this type of responsibility, other means of deterrence must be implemented. These measures may include:

- Public service announcements for litter prevention using various media outlets
- Public education efforts
- More stringent enforcement of existing ordinances
- Increased public work time used for clean-up efforts
- Legislation regarding fees for food purchased at fast food restaurants or convenience stores
- Bottle deposit legislation

JEFFERSON COUNTY 2006 LITTER SURVEY

DATA & SUMMARY

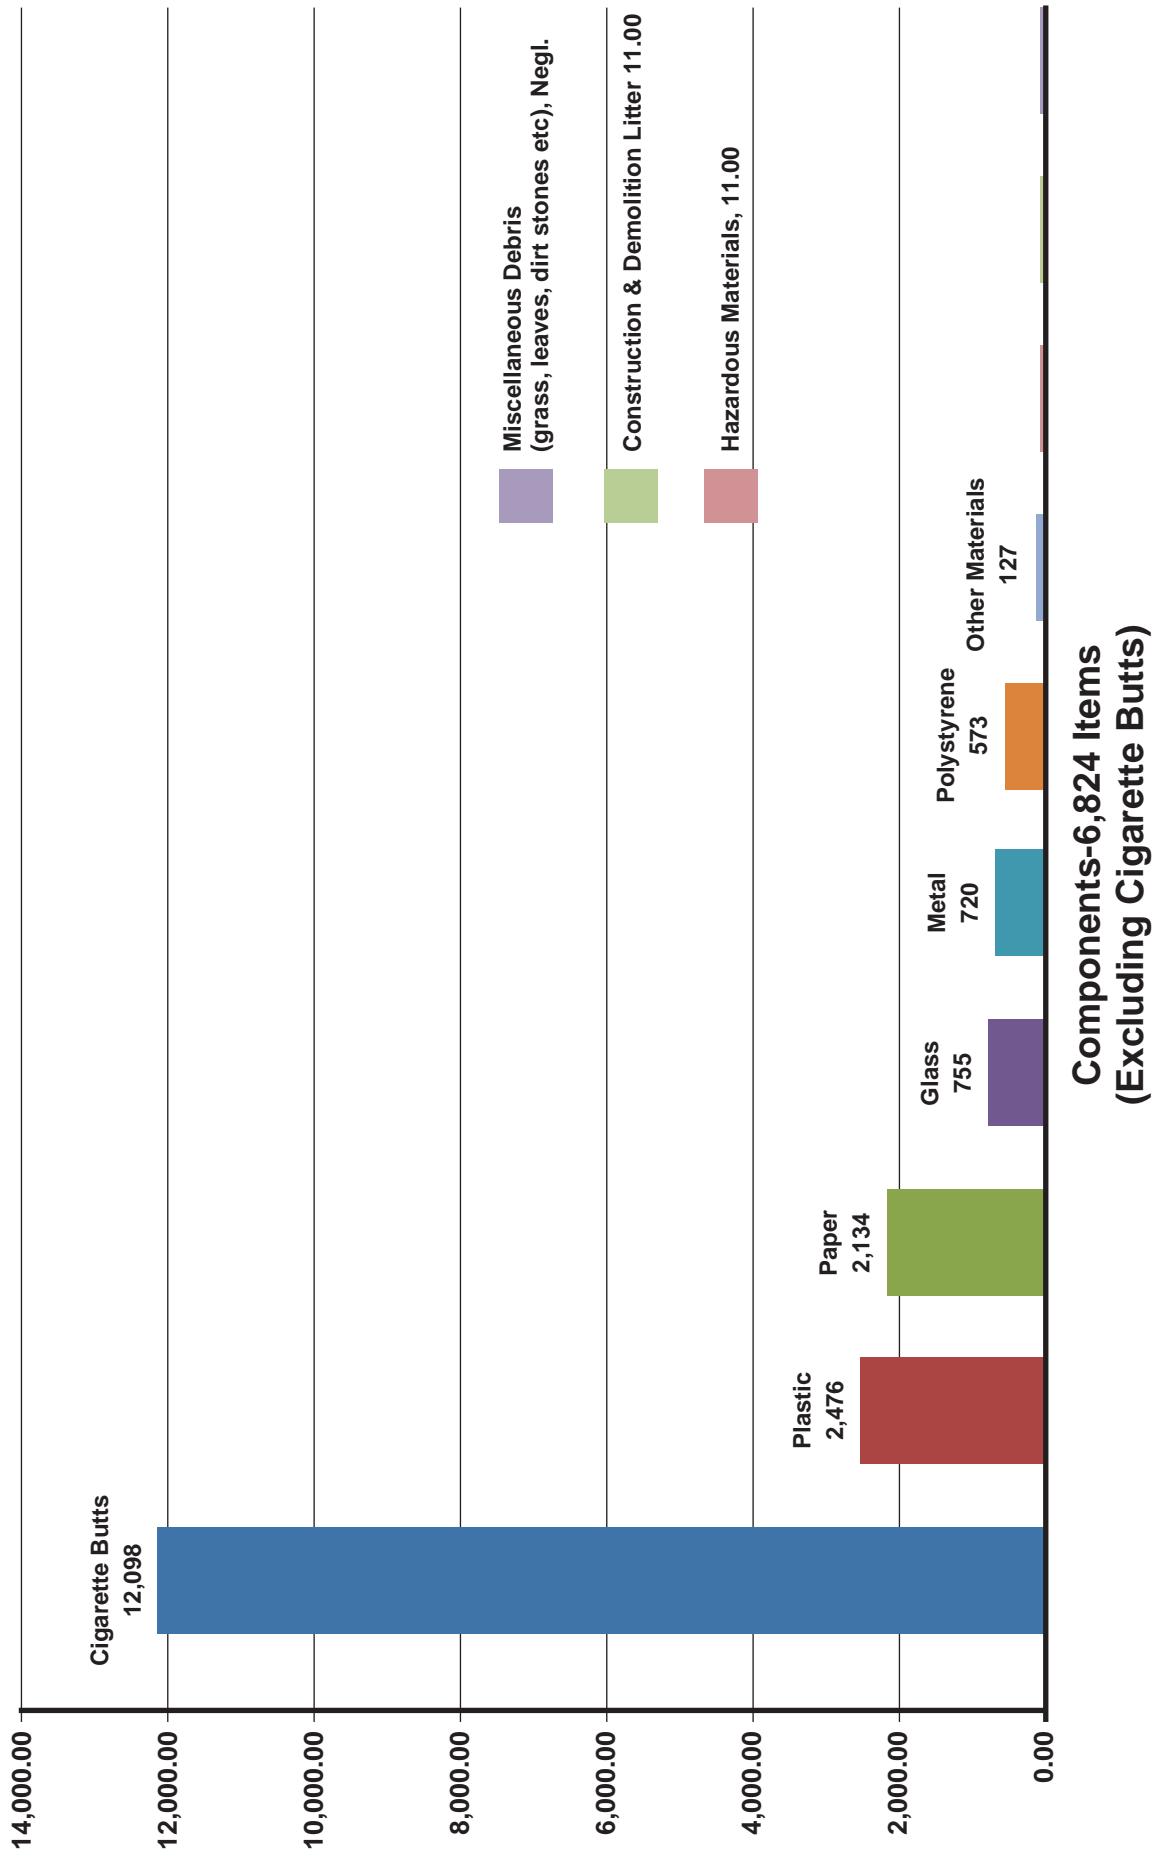

Collection

- Twenty-nine (29) sites along roads in Jefferson County were sampled
- Litter from each site was bagged and labeled
- Litter was sorted into 9 main categories, each category was weighed
- The items were then sorted into sub-categories and then counted and the number recorded
- Aluminum cans, plastic bottles, and glass items were delivered to the Alabama Environmental Council for recycling

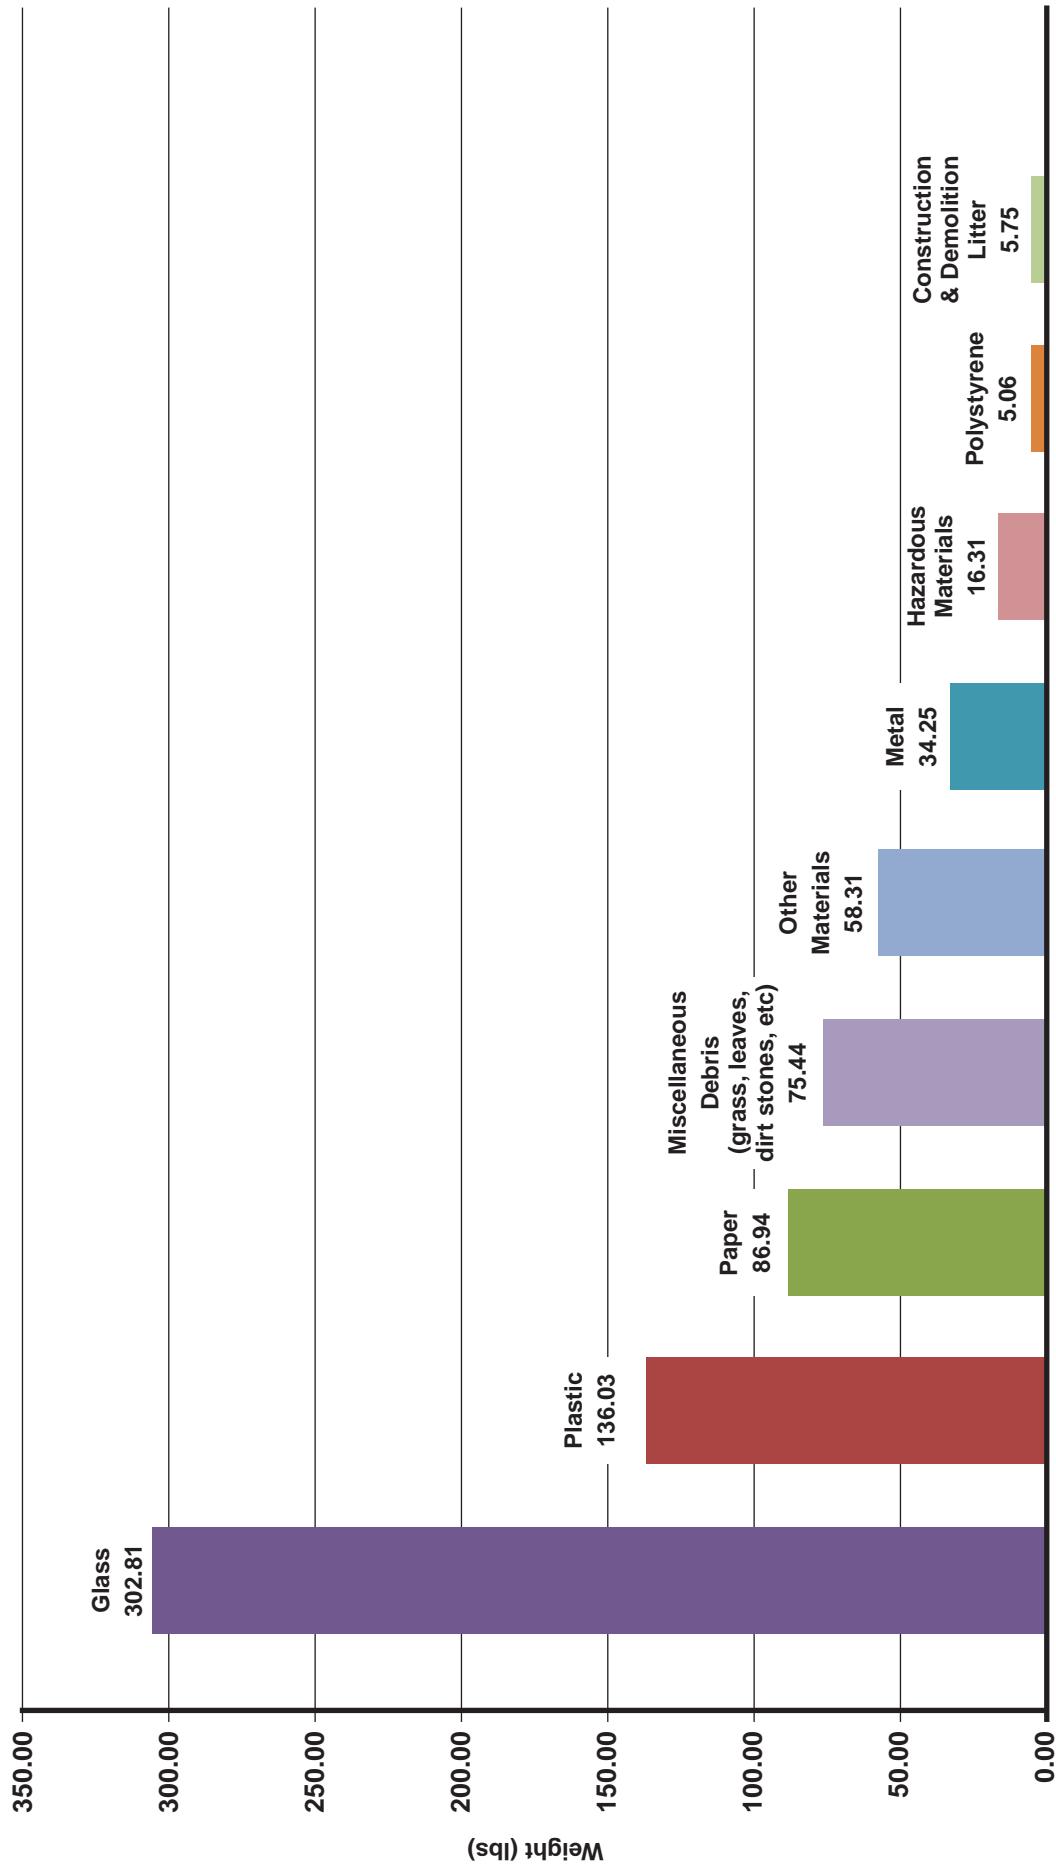

Data and Results

- A total of 351,225 square feet of roadway was sampled
- A total of 6.14 linear miles were sampled
- Total weight of collected litter was approximately 720 pounds
- On average this is approximately 117 pounds of litter per linear mile
- The total number of items collected in the survey were 6,824
- On average this is approximately 1,137 items per linear mile
- Using the survey data, 2,501,400 items would be collected from county maintained roadways in a single visit
- The total number of cigarette butts counted were 12,098
- On average this is 2016 butts per linear mile
- Seventy-eight percent (78%) of the litter collected was food or beverage packaging

Litter Sampling Results by Weight
720 Pounds Collected

JEFFERSON COUNTY 2007 LITTER SURVEY FOLLOW-UP REPORT DATA & SUMMARY

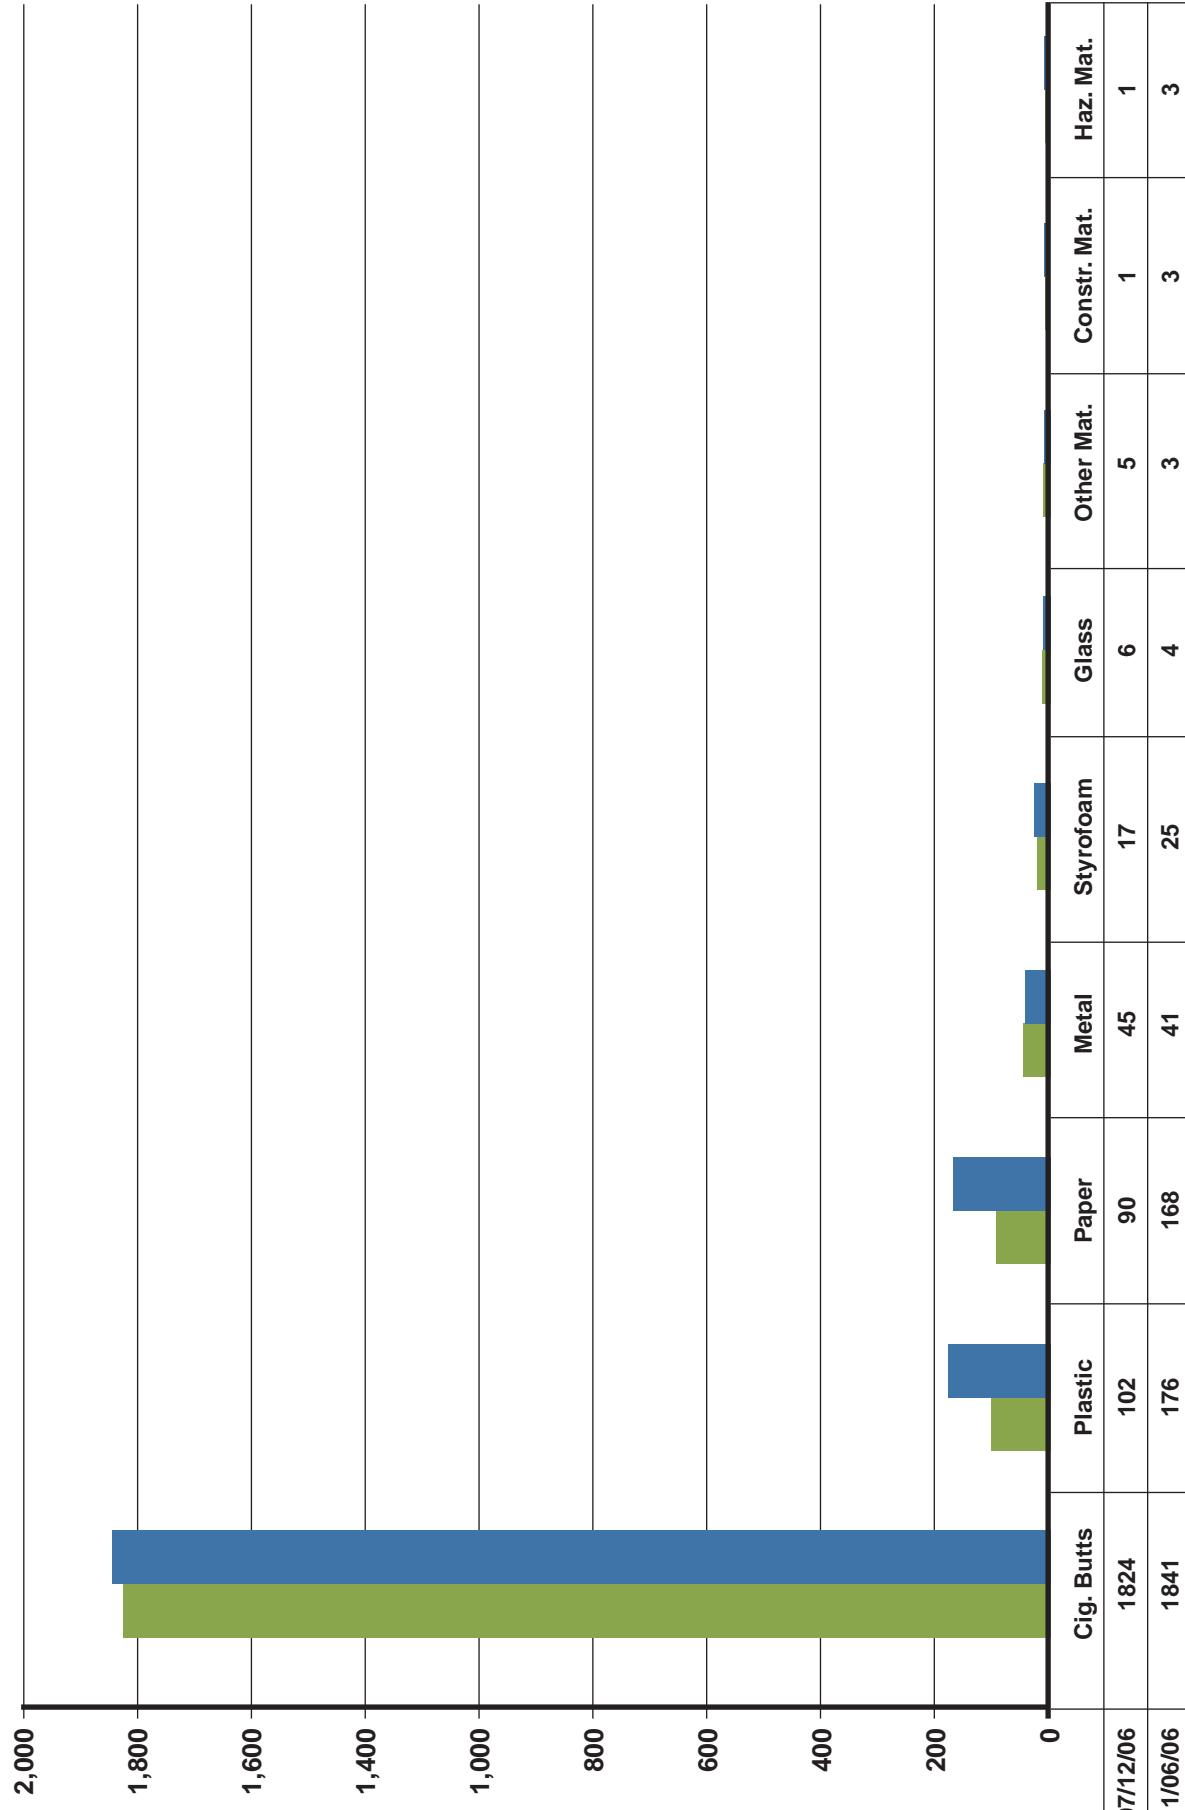

Collection

- Three follow up visits to 3 sites along roads in Jefferson County were sampled
- Litter from each site was bagged and labeled
- Litter was sorted into 9 main categories, each category was weighed
- The items were then sorted into sub-categories and then counted and the number recorded
- Aluminum cans, plastic bottles, and glass items were delivered to the Alabama Environmental Council for recycling

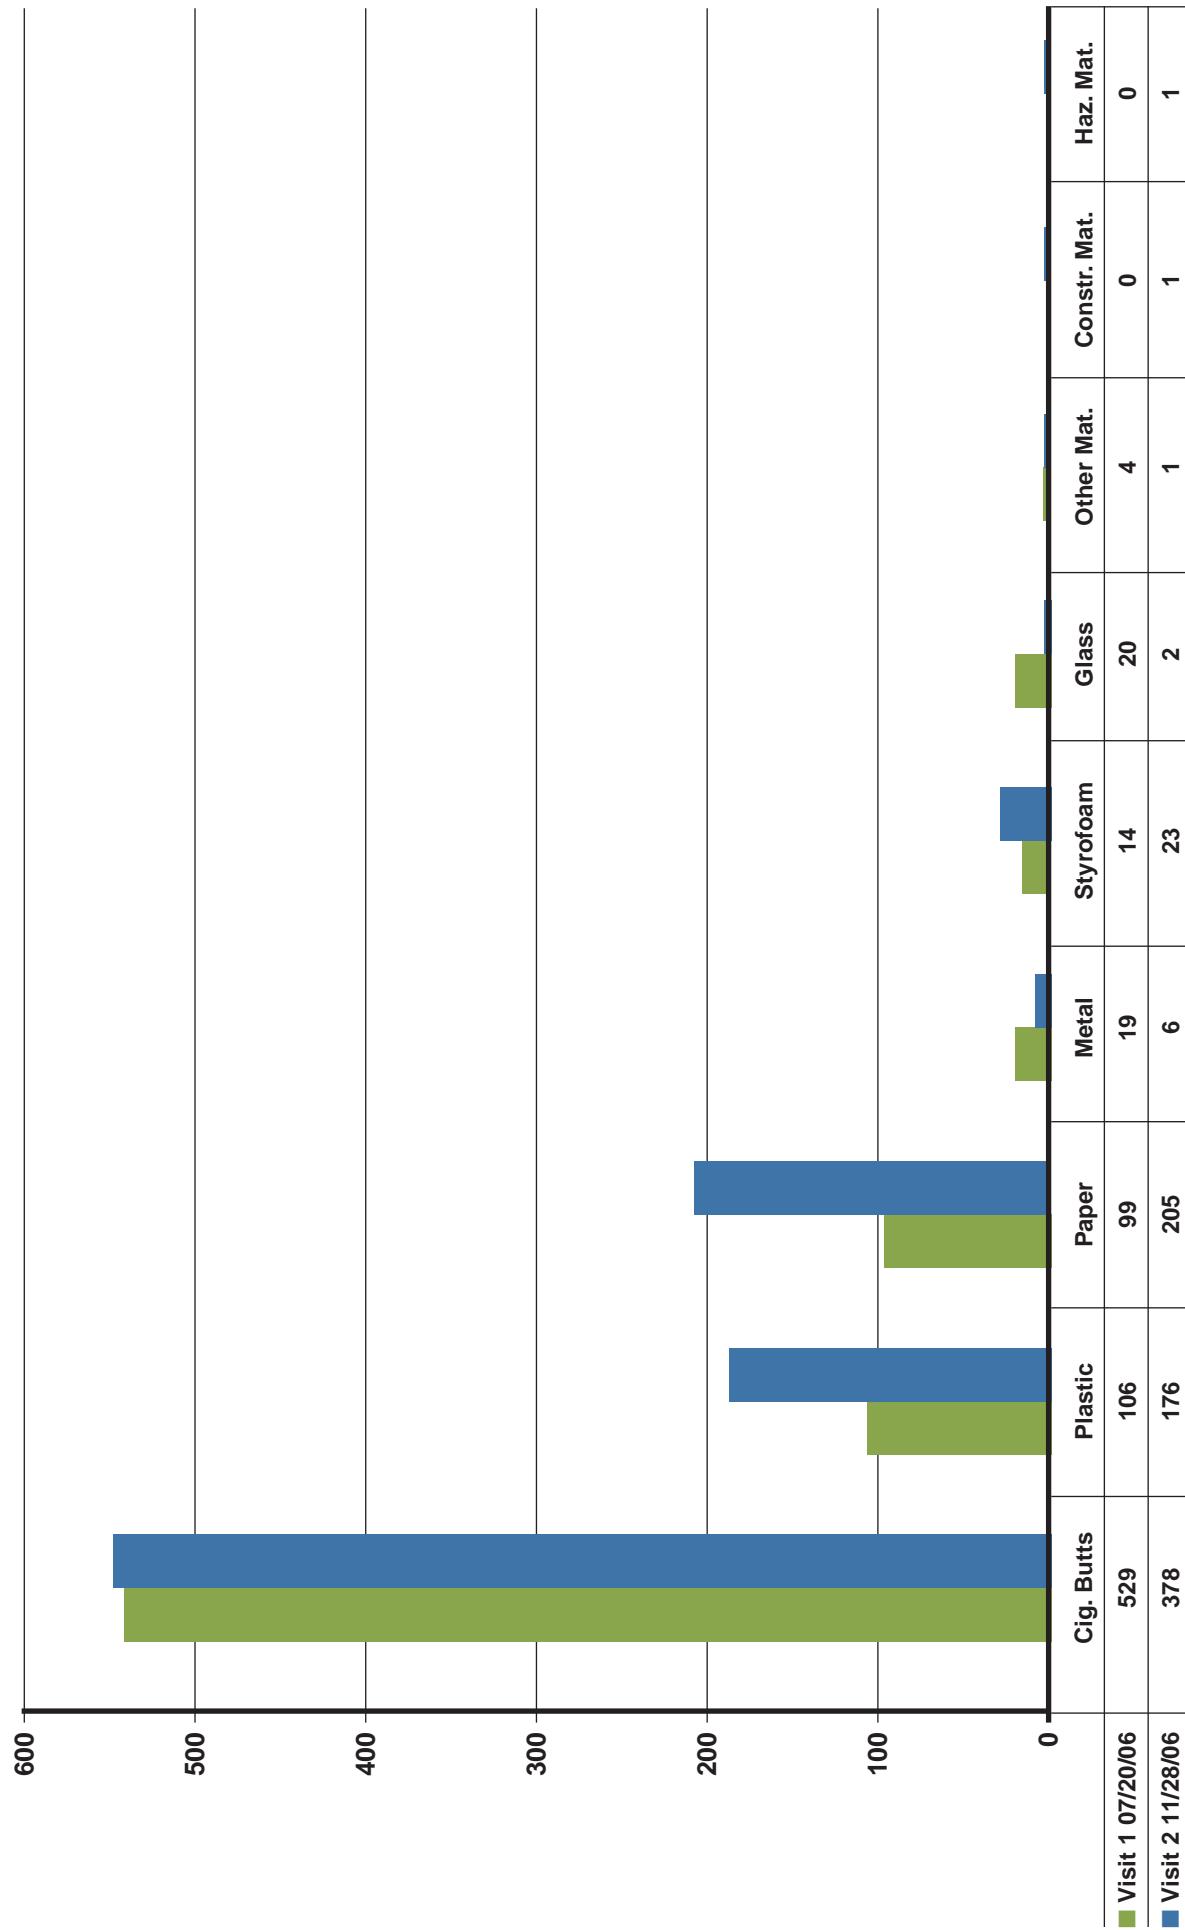

Data and Results

- Total weight of collected litter was approximately 98.44 pounds
- The total number of items collected in the survey were 1,399
- The total number of cigarette butts counted were 2,693
- Analysis of these results revealed that the litter problem on Jefferson County roadways has not improved and litter problem in Jefferson County must be addressed.
