X. SCOPE OF WORK

Camera System Upgrades – Annex

Project Objective

The objective of this project is to install and/or relocate security cameras at the Annex facility. The contractor will provide the necessary rough-in infrastructure, including CAT 6 cabling and conduit, to support camera installation at the specified locations. The rough-in infrastructure shall also be extended to both pedestrian gates to support the communication/access-control system.

Camera Locations

Two cameras will be mounted on the West Pavilion and two cameras on the East Pavilion. Additional camera coverage/rough-in will be provided at the following locations:

- Front gate facing 14th Street South
- West corner gate at 14th Street and 5th Avenue
- Rear gate facing 15th Street South
- East corner gate facing 15th Street South and 5th Avenue
- UPS gate

The facility currently utilizes Morocco cameras. The cameras located at the pavilions will be mounted near the center of each pavilion to provide coverage on both sides.

Pedestrian Gate Access Control

Two access-control readers will be installed at the pedestrian gates. JCDH personnel shall have the ability to operate the gates through the appropriate remote-control system, mobile application on authorized cellular devices, and computer-based system. **The new access-control components must be capable of integrating with the existing system.**

System Compatibility and Equipment

The contractor shall evaluate available camera manufacturers and provide recommendations for equipment that is compatible with, or can be effectively integrated into, the system currently managed by 1 Point.

1 Point/ION will provide the system controller. The contractor shall coordinate with MIS regarding camera installation and system requirements.

TO ADD THE FOLLOWING:

X. SCOPE OF WORK

An NVR (Network Video Recorder) solution was identified during the mandatory site visit discussion as the preferred option for providing a secure and reliable video surveillance system. The final equipment selection shall be coordinated with the appropriate JCDH/MIS personnel.

Installation Requirements

The contractor shall provide separate/additional pricing for the camera installation identified during the project walkthrough. The CAT 6 cabling shall be installed in conduit as required. The Conduit shall maintain a minimum separation of **8 inches from power/voltage wiring**. The power availability at the junction location has been confirmed. There are no specific color requirements for the CAT 6 cabling.

Contractor Responsibilities

The contractor shall be responsible for coordinating with any subcontractors required to complete the project and for managing all personnel under its scope of work. The contractor shall ensure that all proposed equipment, cabling, access-control components, and installation methods are coordinated with the existing infrastructure prior to installation.

*All costs associated with integrating, modifying, or otherwise accommodating the existing system should be included in the contractor's proposal.

This addendum is considered to be a vital part of the ITB and must be submitted with your response. All other terms and conditions of the RFP remain unchanged and in effect.

Regards,

Hazel L. Collins, CPP, CPPM
