SCREENING AND SCOPING

"When environments are untidy, the health department is usually blamed, even though policing the environment may not be its responsibility." This quote from Mr. Homer Calver, one of the founders of Keep America Beautiful, Inc., and a former secretary of the American Public Health Association, was published in the *Journal of Public Health* dated May 1959.

In response to the problem of roadside litter in Jefferson County, the Environmental Quality Committee formed under the Jefferson County Health Action Partnership and began working to promote environmental stewardship. One of the Committee's endeavors was to bring awareness to the blight of litter in the County. The Committee elected to address this environmental concern through removal efforts, education, and promotion of recycling.

For initial assessment in 2006, litter was collected at twenty-six (26) sites along roads dispersed throughout the county and maintained by the Jefferson County Roads and Transportation Division, plus two sites located within the city limits of Birmingham and one site along the I-20/59 interstate. In 2011, the survey was repeated using the original twenty-six (26) sites, plus one additional site within the county and two sites within Birmingham City limits.

For this survey, the Community Assessment Division of Environmental Health Services at the Jefferson County Department of Health (JCDH) collected litter along a total of thirty-two (32) roadways in Jefferson County. The sites selected were located in municipalities that have current National Pollution Discharge Elimination System (NPDES) Stormwater permits issued by Alabama Department of Environmental Management (ADEM) and the United States Environmental Protection Agency's (EPA) Title 40 Code of Federal Regulations Part 122, and are under contract for stormwater management with the Watershed Protection Program at JCDH. Each municipality provides roadway maintenance for their respective sites.

ASSESSMENT

- Research methodology adapted from other studies, specifically the 2004 Ohio Statewide Litter Study conducted by Davey Resource Group for the State of Ohio Conservation and Resource Department
- Evaluate possible sites for collection
- Select sites and map
- Devise strategy for collection
- Research equipment and purchase
- Enlist personnel
- Collect litter samples
- Evaluate composition
- Record data
- Prepare detailed report
- Evaluate results
- Provide recommendations

ASSESSMENT

SITE EVALUATION

- Thirty-two (32) sites were selected in municipalities with current stormwater permits.
- Each municipality submitted possible roadways for collection, and each roadway was evaluated using a matrix for location, shoulder width, traffic speed, and litter volume. Two (2) sites were selected for each municipality based on scores from this matrix. (The city of Brookside did not submit any suggestions. Sites were selected for this city by observed litter volume.)
- Site location, a street map for each site, and data recording sheets were created and maintained for each site.
- Wherever possible, sample sites were marked 500 feet along both sides of the roadway. The sampling depth was ten (10) feet if possible. In several instances, 1000 feet of roadway was marked along one side. Sampling depth remained at ten (10) feet. Anomalies are noted on the data recording sheets for individual sites.
- Global Positioning System (GPS) latitude and longitude readings were determined with the “My GPS Coordinates” application for Apple iPhone on a JCDH-issued cell phone. This facilitated the plotting of locations on a map using Geographic Information Systems (GIS) technology software by Environmental Systems Research Institute (ESRI).

COLLECTION

- Litter was collected by JCDH employees.
- Bags were tagged with pre-printed labels and returned to JCDH for weighing, sorting, and counting.
- Each bag was weighed (exceptions are noted in data charts) and the weight recorded on labels and data recording sheets.
- Items were sorted into nine (9) main categories, then further sorted into sub-categories.
- The number of items in each category and sub-category was recorded.
- Cigarette butts (including cigarillo/little cigar butts) were counted on site with hand-held counters, but were not collected.
- Plastic bottles and metal cans were delivered to the Alabama Environmental Council (AEC) Recycling Center after processing. (Glass is not currently accepted.)

DATA

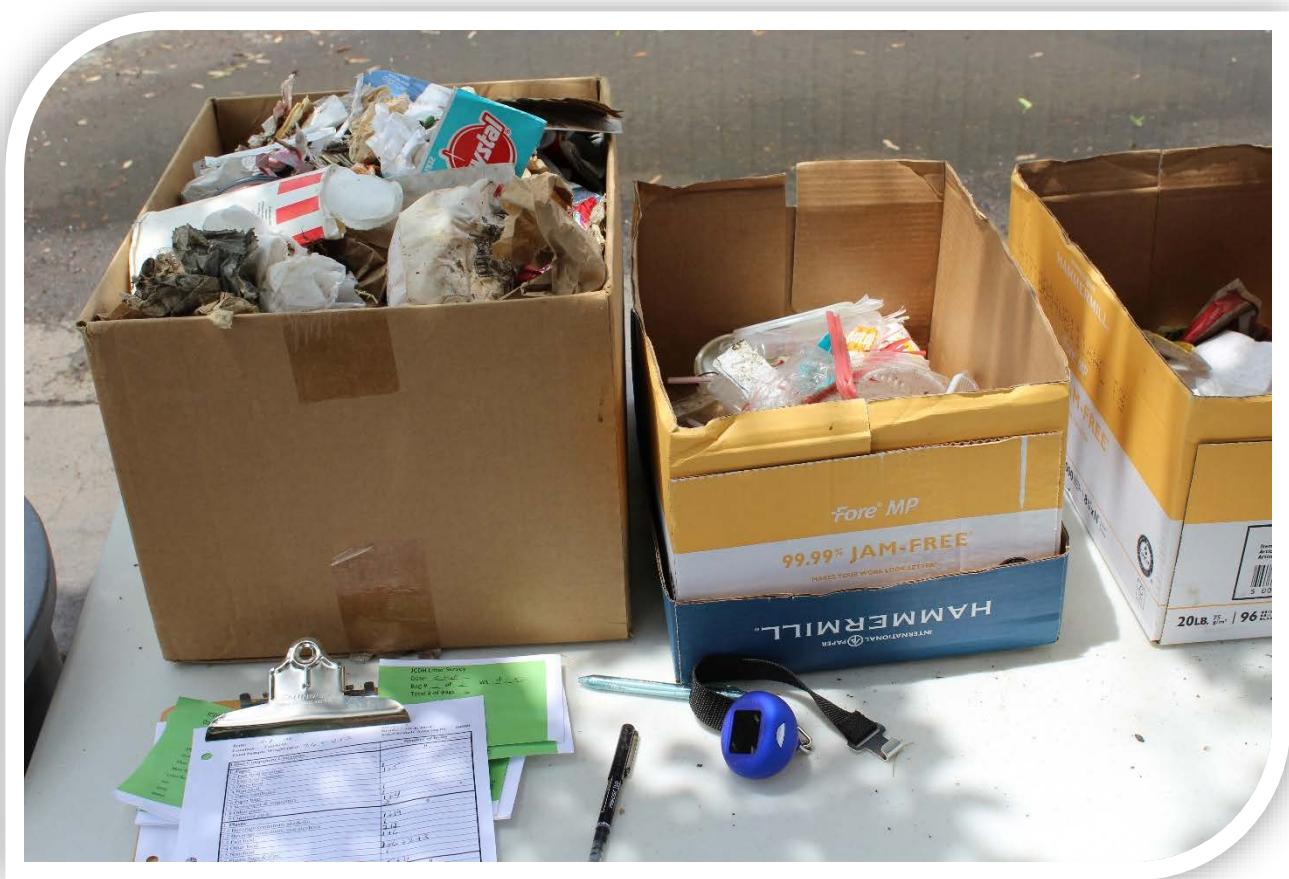

- Data was compiled and input into Excel spreadsheets
- GPS readings were input and a map of site locations using MyMaps.US website. For detailed map information, see the following link:
<https://mymaps.us/?map=5b4f49e149dac03610731593dc8b> .

REPORTING

See Appendix for Data and Graphs

HIGHLIGHTS

- A total of 325,500 square feet of roadway was sampled
- A total of 6.01 linear miles of roadway was sampled
- The total weight of litter collected was 332 pounds
- The calculated average weight of litter collected was 55 pounds per linear mile
- The total number of items collected was 5,325
- The calculated average number of items collected was 886 per linear mile
- The total number of cigarette butts counted was 9,199
- The calculated average number of cigarette butts counted was 1531 per linear mile
- For individual category results see Appendix

RECOMMENDATIONS

In order to address the ongoing litter problem within Jefferson County, cooperative efforts must be initiated by both governmental and private agencies. Analysis of the results reveals that most of the litter collected was related to fast food consumption or convenience store purchases (68%). Citizens must become aware of the detrimental effects of litter on the environment and the economy. Individual responsibility would be an effective deterrent to the accumulation of roadside litter. If citizens do not exercise this type of responsibility, other means of deterrence must be implemented. These measures may include:

- Public Service Announcements (PSAs) for litter prevention using various media and social media outlets
- Legislation regarding fees for food purchased at fast food restaurants and convenience stores
- More stringent enforcement of existing ordinances
- Increased public work time used for clean-up efforts
- Local public education efforts
- Assign-a-RoadSide Programs
- Bottle deposit legislation

JEFFERSON COUNTY 2017-2018 LITTER SURVEY DATA OVERVIEW

2017-2018	
Square footage (ft ²)	325,500
Linear miles	6.01
Total weight (lbs)	332
Avg weight per mile (lbs)	55
Total # of items	5,325
Avg # of items per mile	886
Total # of cigarette butts	9,199
Avg # of cigarette butts per mile	1531
Food and beverage packaging (%)	68

JEFFERSON COUNTY 2011 LITTER SURVEY DATA & SUMMARY

COLLECTION

- Twenty-nine (29) sites along roads in Jefferson County were sampled
- Litter from each site was bagged and labeled
- Litter was sorted into nine (9) main categories and each category was weighed
- Items were then sorted into sub-categories, then counted and the number recorded
- Aluminum cans, plastic bottles, and glass items were delivered to the AEC for recycling

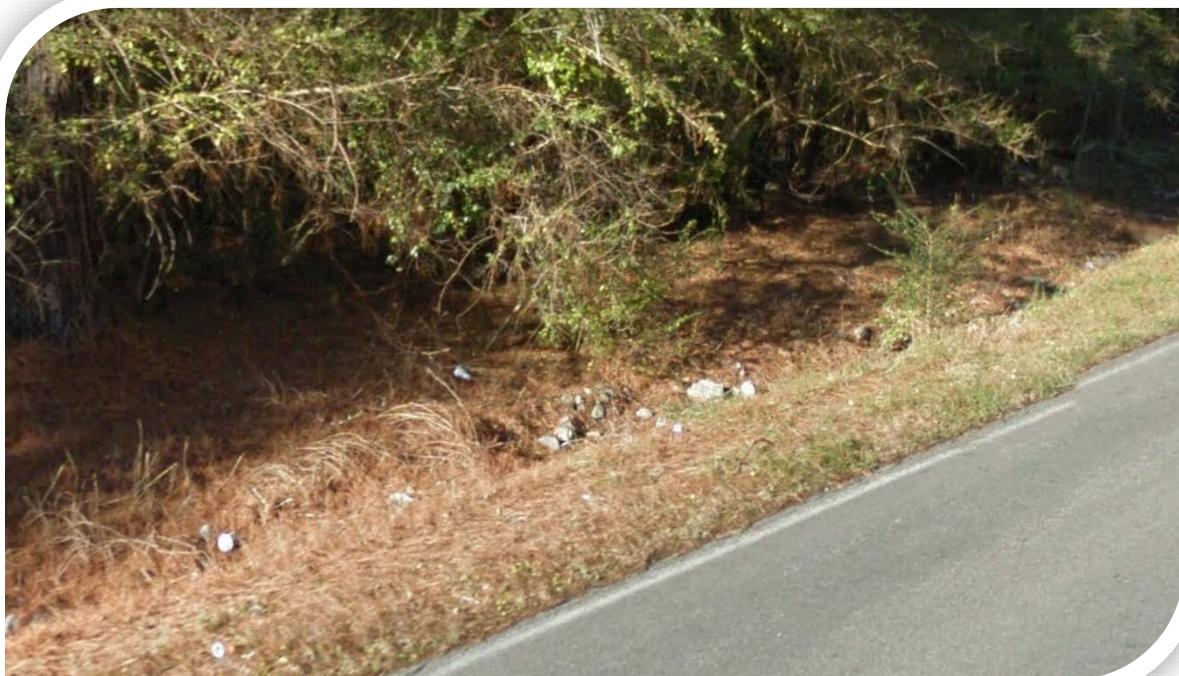

DATA & RESULTS

- A total of 351,225 square feet of roadway was sampled
- A total of 6.14 linear miles of roadway was sampled
- The total weight of litter collected was 766 pounds
- The calculated average weight of litter collected was 125 pounds per linear mile
- The total number of items collected was 6,116
- The calculated average number of items collected was 996 per linear mile
- 2,191,200 items would be collected from county maintained roadways in a single visit based on survey data
- The total number of cigarette butts counted was 8,648
- The calculated average number of cigarette butts counted was 1,408 per linear mile
- Seventy-eight percent (78%) of litter collected was food or beverage packaging

JEFFERSON COUNTY 2006 LITTER SURVEY DATA & SUMMARY

COLLECTION

- Twenty-nine (29) sites along roads in Jefferson County were sampled
- Litter from each site was bagged and labeled
- Litter was sorted into nine (9) main categories and each category was weighed
- Items were then sorted into sub-categories, then counted and the number recorded
- Aluminum cans, plastic bottles, and glass items were delivered to the AEC for recycling

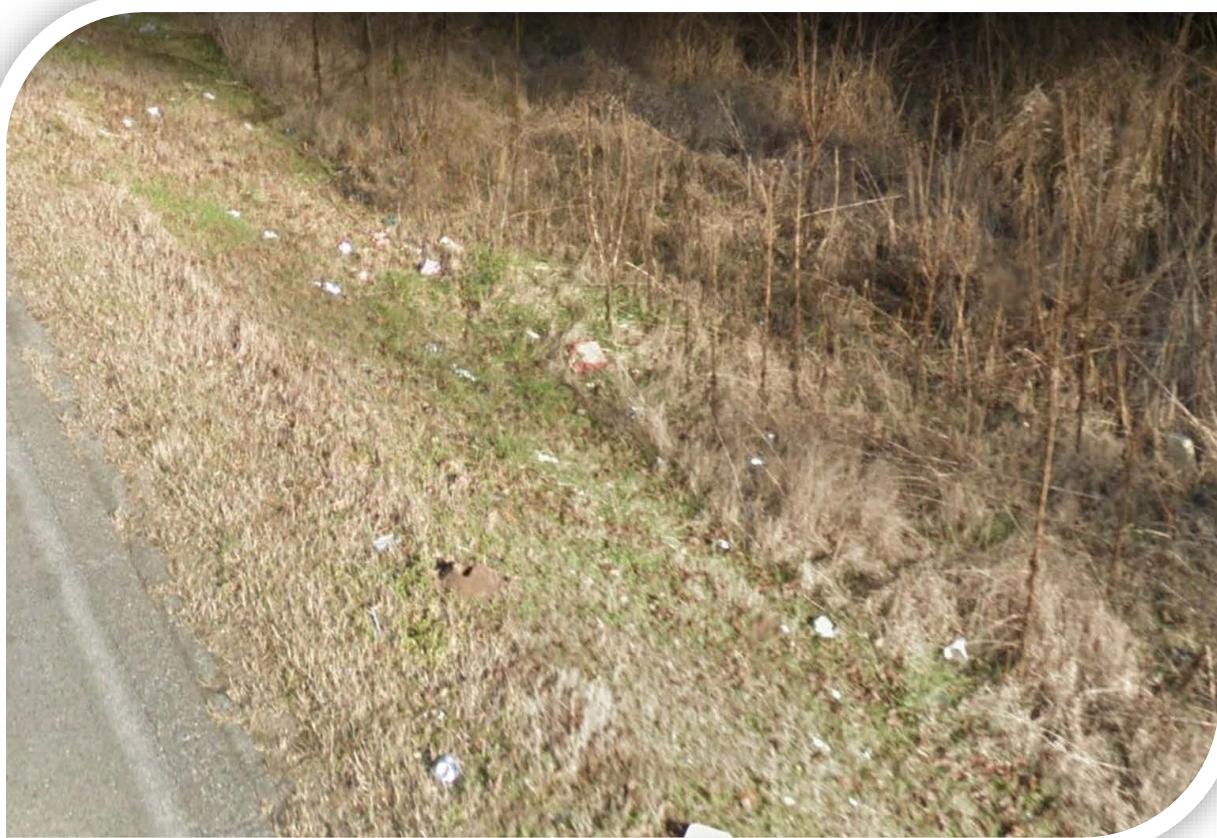

DATA & RESULTS

- A total of 351,225 square feet of roadway was sampled
- A total of 6.14 linear miles of roadway was sampled
- The total weight of litter collected was 720 pounds
- The calculated average weight of litter collected was 117 pounds per linear mile
- The total number of items collected was 6,824
- The calculated average number of items collected was 1,137 per linear mile
- 2,501,400 items would be collected from county maintained roadways in a single visit based on survey data
- The total number of cigarette butts counted was 12,098
- The calculated average number of cigarette butts counted was 2,016 per linear mile
- Seventy-eight percent (78%) of litter collected was food or beverage packaging

JEFFERSON COUNTY 2006 & 2011 LITTER SURVEY DATA COMPARISON

	2011	2006
Square footage (ft ²)	351,225	351,225
Linear miles	6.14	6.14
Total weight (lbs)	766	720
Avg weight per mile (lbs)	125	117
Total # of items	6,116	6,824
Avg # of items per mile	996	1,137
Total # of cigarette butts	8,648	12,098
Avg # of cigarette butts per mile	1,408	2,016
Food and beverage packaging (%)	78	78

ANALYSIS

The 2006 and 2011, Litter Surveys were conducted predominately on Jefferson County roads that were maintained by the Jefferson County Public Works Department. Two of the roads surveyed were maintained by the City of Birmingham, and one was a portion of I-20/59 Southbound which was maintained by Sweeping Corporation of America. The 2006 and 2011 studies were conducted in partnership with the Environmental Protection Department of the Jefferson County Commission.

The 2017-2018 Litter Study was conducted on municipally maintained roads. This litter study used the same collection and analysis protocol as the earlier studies and will be utilized as a baseline for subsequent studies of the selected roads. Results will help the municipalities determine interventions and evidence based strategies to reduce roadway litter. Preventing litter on roadways helps protect adjacent waterways, save road maintenance costs, and preserve community property values.
